Preface .....	xvii
<b>1 Introduction to Digital Signal Processing .....</b>	<b>1</b>
1.1 Introduction .....	1
1.2 Signals .....	1
1.3 Frequency-Domain Representation .....	5
1.4 Notation .....	7
1.5 Signal Processing .....	8
1.6 Analog Filters .....	15
1.7 Applications of Analog Filters .....	16
1.8 Digital Filters .....	20
1.9 Three DSP Applications .....	24
1.9.1 Processing of EKG Signals .....	24
1.9.2 Processing of Stock-Exchange Data .....	24
1.9.3 Processing of DNA and Protein Sequences .....	28
<b>2 Discrete-Time Systems .....</b>	<b>33</b>
2.1 Introduction .....	33
2.2 Basic System Properties .....	34
2.2.1 Linearity .....	34
2.2.2 Time Invariance .....	36
2.2.3 Causality .....	37
2.3 Characterization of Discrete-Time Systems .....	41
2.3.1 Nonrecursive Systems .....	41
2.3.2 Recursive Systems .....	42
2.4 Discrete-Time System Networks .....	42
2.4.1 Network Analysis .....	44
2.4.2 Implementation of Discrete-Time Systems .....	47
2.4.3 Signal Flow-Graph Analysis .....	48
2.5 Introduction to Time-Domain Analysis .....	56
2.6 Convolution Summation .....	64
2.6.1 Graphical Interpretation .....	66
2.6.2 Alternative Classification .....	71
2.7 Stability .....	72
2.8 State-Space Representation .....	75
2.8.1 Computability .....	75
2.8.2 Characterization .....	77
2.8.3 Time-Domain Analysis .....	84
2.8.4 Applications of State-Space Method .....	85
2.9 Problems .....	86

<b>3</b>	<b>The Fourier Series and Transform</b>	<b>99</b>
3.1	Introduction	99
3.2	Fourier Series	100
3.2.1	Definition	100
3.2.2	Particular Forms	101
3.2.3	Theorems and Properties	106
3.3	Fourier Transform	115
3.3.1	Derivation	116
3.3.2	Particular Forms	119
3.3.3	Theorems and Properties	125
3.3.4	Impulse Functions	137
3.3.5	Generalized Functions	147
3.3.6	Periodic Signals	148
3.3.7	Unit-Step Function	149
3.4	Interrelation between the Fourier Series and the Fourier Transform	153
3.5	Poisson's Summation Formula	159
3.6	Laplace Transform	161
3.7	Problems	161
<b>4</b>	<b>The Z Transform</b>	<b>169</b>
4.1	Introduction	169
4.2	Definition of Z Transform	170
4.3	Convergence Properties	170
4.4	The Z Transform as a Laurent Series	173
4.5	Inverse Z Transform	174
4.6	Additional Theorems and Properties	176
4.7	Z Transforms of Elementary Discrete-Time Signals	181
4.8	Z-Transform Inversion Techniques	186
4.8.1	Use of Binomial Series	189
4.8.2	Use of Partial Fractions	194
4.8.3	Use of Long Division	198
4.8.4	Use of Initial-Value Theorem	201
4.8.5	Use of Real-Convolution Theorem	202
4.9	Spectral Representation of Discrete-Time Signals	202
4.9.1	Frequency Spectrum	202
4.9.2	Periodicity of Frequency Spectrum	203
4.9.3	Interrelations	207
4.10	Problems	209
<b>5</b>	<b>Application of Transform Theory to Systems</b>	<b>215</b>
5.1	Introduction	215
5.2	The Discrete-Time Transfer Function	215
5.2.1	Derivation of $H(z)$ from Difference Equation	216
5.2.2	Derivation of $H(z)$ from System Network	217
5.2.3	Derivation of $H(z)$ from State-Space Characterization	218

5.3	Stability .....	221
5.3.1	Constraint on Poles .....	221
5.3.2	Constraint on Eigenvalues .....	224
5.3.3	Stability Criteria .....	227
5.4	Time-Domain Analysis .....	235
5.5	Frequency-Domain Analysis .....	237
5.5.1	Steady-State Sinusoidal Response .....	237
5.5.2	Evaluation of Frequency Response .....	239
5.5.3	Periodicity of Frequency Response .....	240
5.5.4	Aliasing .....	241
5.5.5	Frequency Response of Digital Filters .....	244
5.6	Transfer Functions for Digital Filters .....	258
5.6.1	First-Order Transfer Function .....	258
5.6.2	Second-Order Transfer Functions .....	259
5.6.3	Higher-Order Transfer Functions .....	264
5.7	Amplitude and Delay Distortion .....	265
5.8	Continuous-Time Systems .....	267
5.8.1	The Transfer Function .....	267
5.8.2	Time-Domain Response .....	267
5.8.3	Frequency-Domain Analysis .....	270
5.9	Problems .....	272
<b>6</b>	<b>The Sampling Process .....</b>	<b>279</b>
6.1	Introduction .....	279
6.2	Impulse-Modulated Signals .....	280
6.2.1	Interrelation between Fourier and Z Transforms .....	282
6.2.2	Spectral Interrelations between Discrete- and Continuous-Time Signals .....	284
6.3	The Sampling Theorem .....	287
6.4	Aliasing .....	289
6.5	Graphical Representation of Interrelations .....	290
6.6	Processing of Continuous-Time Signals Using Digital Filters ...	291
6.7	Practical A/D and D/A Converters .....	297
6.8	Problems .....	302
<b>7</b>	<b>The Discrete Fourier Transform .....</b>	<b>311</b>
7.1	Introduction .....	311
7.2	Definition .....	312
7.3	Inverse DFT .....	312
7.4	Properties .....	313
7.4.1	Linearity .....	313
7.4.2	Periodicity .....	313
7.4.3	Symmetry .....	313
7.5	Interrelation between the DFT and the Z Transform .....	316
7.5.1	Time-Domain Aliasing in Discrete-Time Signals .....	321
7.6	Interrelation between the DFT and the CFT .....	322

## **X Contents**

7.6.1	Time-Domain Aliasing in Periodic Discrete-Time Signals .....	322
7.7	Interrelation between the DFT and the Fourier Series .....	323
7.8	Simplified Notation .....	324
7.9	Periodic Convolutions .....	325
7.9.1	Time-Domain Periodic Convolution .....	325
7.9.2	Frequency-Domain Periodic Convolution .....	328
7.10	Fast Fourier-Transform Algorithms .....	328
7.10.1	Decimation-in-Time Algorithm .....	328
7.10.2	Decimation-in-Frequency Algorithm .....	335
7.10.3	Inverse DFT .....	341
7.11	Application of the FFT Approach to Signal Processing .....	342
7.11.1	Overlap-and-Add Method .....	343
7.11.2	Overlap-and-Save Method .....	345
7.12	Problems .....	348
<b>8</b>	<b>The Window Technique .....</b>	<b>353</b>
8.1	Introduction .....	353
8.2	Basic Principles .....	353
8.3	Discrete-Time Windows .....	360
8.3.1	Rectangular Window .....	363
8.3.2	von Hann and Hamming Windows .....	364
8.3.3	Blackman Window .....	367
8.3.4	Dolph-Chebyshev Window .....	368
8.3.5	Kaiser Window .....	370
8.3.6	Ultraspherical Window .....	378
8.3.7	Periodic Discrete-Time Windows .....	383
8.3.8	Application of Window Technique .....	385
8.4	Problems .....	389
<b>9</b>	<b>Realization of Digital Filters .....</b>	<b>393</b>
9.1	Introduction .....	393
9.2	Realization .....	395
9.2.1	Direct Realization .....	396
9.2.2	Direct Canonic Realization .....	401
9.2.3	State-Space Realization .....	402
9.2.4	Lattice Realization .....	404
9.2.5	Cascade Realization .....	408
9.2.6	Parallel Realization .....	410
9.2.7	Transposition .....	413
9.3	Implementation .....	415
9.3.1	Design Considerations .....	415
9.3.2	Systolic Implementations .....	416
9.4	Problems .....	421

<b>10</b>	<b>Design of Nonrecursive Filters</b>	<b>429</b>
10.1	Introduction	429
10.2	Properties of Constant-Delay Nonrecursive Filters	430
10.2.1	Impulse Response Symmetries	430
10.2.2	Frequency Response	433
10.2.3	Noncausal Nonrecursive Filters	434
10.2.4	Location of Zeros	435
10.3	Design Using the Fourier Series	436
10.4	Use of Window Technique	438
10.5	Prescribed Filter Specifications	443
10.5.1	Design Procedure Using the Kaiser Window	445
10.5.2	Design Procedure Using the Ultraspherical Window	454
10.5.3	Optimized Design Using the Ultraspherical Window	460
10.5.4	Comparison of Kaiser and Ultraspherical Methods	467
10.5.5	Optimality of Nonrecursive Filters	468
10.6	Design Based on Numerical-Analysis Formulas	469
10.6.1	Design of Digital Differentiators Using Window Method	474
10.7	Problems	475
 <b>11</b>	 <b>Approximations for Analog Filters</b>	 <b>481</b>
11.1	Introduction	481
11.2	Basic Concepts	482
11.2.1	Ideal and Practical Filters	483
11.2.2	Realizability Constraints	484
11.3	Butterworth Approximation	485
11.3.1	Derivation	487
11.3.2	Normalized Transfer Function	487
11.3.3	Minimum Filter Order	490
11.4	Chebyshev Approximation	492
11.4.1	Derivation	493
11.4.2	Normalized Transfer Function	496
11.4.3	Minimum Filter Order	498
11.5	Inverse-Chebyshev Approximation	500
11.5.1	Normalized Transfer Function	501
11.5.2	Minimum Filter Order	502
11.6	Elliptic Approximation	504
11.6.1	Fifth-Order Approximation	505
11.6.2	Minimum Filter Order	506
11.6.3	Normalized Transfer Function	508
11.7	Bessel-Thomson Approximation	510
11.8	Transformations	513
11.8.1	Lowpass-to-Lowpass Transformation	513
11.8.2	Lowpass-to-Bandpass Transformation	513
11.9	Problems	517

<b>12</b>	<b>Design of Recursive Filters</b>	<b>527</b>
12.1	Introduction	527
12.2	Realizability Constraints	527
12.3	Invariant Impulse-Response Method	528
12.4	Modified Invariant Impulse-Response Method	532
12.5	Matched-Z Transformation Method	536
12.6	Bilinear-Transformation Method	539
12.6.1	Derivation	539
12.6.2	Mapping Properties of Bilinear Transformation	542
12.6.3	The Warping Effect	543
12.7	Digital-Filter Transformations	548
12.7.1	General Transformation	548
12.7.2	Lowpass-to-Lowpass Transformation	550
12.7.3	Lowpass-to-Bandstop Transformation	551
12.7.4	Application	553
12.8	Comparison between Recursive and Nonrecursive Designs	553
12.9	Problems	554
<b>13</b>	<b>Recursive Filters Satisfying Prescribed Specifications</b>	<b>561</b>
13.1	Introduction	561
13.2	Design Procedure	562
13.3	Design Formulas	563
13.3.1	Lowpass and Highpass Filters	563
13.3.2	Bandpass and Bandstop Filters	565
13.3.3	Butterworth Filters	570
13.3.4	Chebyshev Filters	572
13.3.5	Inverse-Chebyshev Filters	573
13.3.6	Elliptic Filters	574
13.4	Design Using the Formulas and Tables	575
13.5	Constant Group Delay	583
13.5.1	Delay Equalization	583
13.5.2	Zero-Phase Filters	584
13.6	Amplitude-Response Equalization	585
13.7	Problems	585
<b>14</b>	<b>Effects of Finite Word Length in Digital Filters</b>	<b>589</b>
14.1	Introduction	589
14.2	Number Representation	590
14.2.1	Binary System	590
14.2.2	Fixed-Point Arithmetic	591
14.2.3	Floating-Point Arithmetic	595
14.2.4	Number Quantization	597
14.3	Coefficient Quantization	599
14.4	Low-Sensitivity Structures	602
14.4.1	Case I	605
14.4.2	Case II	606

14.5	Product Quantization .....	608
	14.5.1 Basics of Random Signals .....	608
	14.5.2 Application of Statistical Principles to Digital Filters ....	612
	14.5.3 Noise Analysis .....	614
14.6	Signal Scaling .....	616
	14.6.1 Method A .....	617
	14.6.2 Method B .....	618
	14.6.3 Types of Scaling .....	619
	14.6.4 Application of Scaling .....	621
14.7	Minimization of Output Roundoff Noise .....	623
14.8	Limit-Cycle Oscillations .....	627
	14.8.1 Quantization Limit Cycles .....	628
	14.8.2 Overflow Limit Cycles .....	631
	14.8.3 Elimination of Quantization Limit Cycles .....	632
	14.8.4 Elimination of Overflow Limit Cycles .....	637
14.9	Problems .....	639
<b>15</b>	<b>Design of Nonrecursive Filters Using Optimization Methods .....</b>	<b>645</b>
15.1	Introduction .....	645
15.2	Problem Formulation .....	646
	15.2.1 Lowpass and Highpass Filters .....	646
	15.2.2 Bandpass and Bandstop Filters .....	647
	15.2.3 Alternation Theorem .....	649
15.3	Remez Exchange Algorithm .....	650
	15.3.1 Initialization of Extremals .....	651
	15.3.2 Location of Maxima of the Error Function .....	651
	15.3.3 Computation of $ E(\omega) $ and $P_c(\omega)$ .....	653
	15.3.4 Rejection of Superfluous Potential Extremals .....	653
	15.3.5 Computation of Impulse Response .....	655
15.4	Improved Search Methods .....	655
	15.4.1 Selective Step-by-Step Search .....	655
	15.4.2 Cubic Interpolation .....	659
	15.4.3 Quadratic Interpolation .....	661
	15.4.4 Improved Formulation .....	661
15.5	Efficient Remez Exchange Algorithm .....	663
15.6	Gradient Information .....	666
15.7	Prescribed Specifications .....	672
15.8	Generalization .....	675
	15.8.1 Antisymmetrical Impulse Response and Odd Filter Length .....	675
	15.8.2 Even Filter Length .....	677
15.9	Digital Differentiators .....	678
	15.9.1 Problem Formulation .....	679
	15.9.2 First Derivative .....	679
	15.9.3 Prescribed Specifications .....	680
15.10	Arbitrary Amplitude Responses .....	684

## **xiv**    **Contents**

15.11	Multiband Filters	684
15.12	Problems	686
<b>16</b>	<b>Design of Recursive Filters Using Unconstrained Optimization</b>	<b>691</b>
16.1	Introduction	691
16.2	Problem Formulation	692
16.3	Newton's Method	694
16.4	Quasi-Newton Algorithms	697
16.4.1	Basic Quasi-Newton Algorithm	698
16.4.2	Updating Formulas for Matrix $S_{k+1}$	701
16.4.3	Inexact Line Searches	701
16.4.4	Practical Quasi-Newton Algorithm	705
16.5	Minimax Algorithms	710
16.6	Improved Minimax Algorithms	713
16.7	Design of Recursive Filters	717
16.7.1	Objective Function	717
16.7.2	Gradient Information	717
16.7.3	Stability	718
16.7.4	Minimum Filter Order	718
16.7.5	Use of Weighting	718
16.8	Design of Recursive Delay Equalizers	724
16.9	Problems	729
<b>17</b>	<b>Design of Recursive Filters Using Constrained Optimization</b>	<b>735</b>
17.1	Introduction	735
17.2	Design Problem	737
17.3	Constrained Optimization Problem	739
17.3.1	Group-Delay Deviation	741
17.3.2	Passband, Transition Band, and Stopband Constraints	744
17.3.3	Stability Constraints	747
17.3.4	Constrained Optimization Problem	748
17.4	Design Procedure	750
17.5	Alternative Initialization Approaches	766
17.6	Comparison of Recursive versus Nonrecursive Digital Filters	767
17.7	Problems	772
<b>18</b>	<b>Wave Digital Filters</b>	<b>779</b>
18.1	Introduction	779
18.2	Sensitivity Considerations	779
18.3	Wave Network Characterization	781
18.4	Element Realizations	783
18.4.1	Impedances	783
18.4.2	Voltage Sources	784
18.4.3	Series Wire Interconnection	785
18.4.4	Parallel Wire Interconnection	788

18.4.5	2-Port Adaptors .....	788
18.4.6	Transformers .....	789
18.4.7	Unit Elements .....	790
18.4.8	Circulators .....	793
18.4.9	Resonant Circuits .....	793
18.4.10	Realizability Constraint .....	795
18.5	Lattice Wave Digital Filters .....	795
18.5.1	Analysis .....	795
18.5.2	Alternative Lattice Configuration .....	797
18.5.3	Digital Realization .....	800
18.6	Ladder Wave Digital Filters .....	802
18.7	Filters Satisfying Prescribed Specifications .....	806
18.8	Frequency-Domain Analysis .....	809
18.9	Scaling .....	811
18.10	Elimination of Limit-Cycle Oscillations .....	812
18.11	Related Synthesis Methods .....	814
18.12	A Cascade Synthesis Based on the Wave Characterization .....	815
18.12.1	Generalized-Immittance Converters .....	815
18.12.2	Analog G-CGIC Configuration .....	815
18.12.3	Digital G-CGIC Configuration .....	817
18.12.4	Cascade Synthesis .....	818
18.12.5	Signal Scaling .....	822
18.12.6	Output Noise .....	822
18.13	Choice of Structure .....	823
18.14	Problems .....	825
<b>19</b>	<b>Signal Processing Applications .....</b>	<b>833</b>
19.1	Introduction .....	833
19.2	Sampling-Frequency Conversion .....	833
19.2.1	Decimators .....	834
19.2.2	Interpolators .....	836
19.2.3	Sampling-Frequency Conversion by a Noninteger Factor .....	842
19.2.4	Design Considerations .....	842
19.3	Quadrature-Mirror-Image Filter Banks .....	842
19.3.1	Operation .....	843
19.3.2	Elimination of Aliasing Errors .....	846
19.3.3	Design Considerations .....	849
19.3.4	Perfect Reconstruction .....	852
19.4	Hilbert Transformers .....	852
19.4.1	Design of Hilbert Transformers .....	856
19.4.2	Single-Sideband Modulation .....	860
19.4.3	Sampling of Bandpassed Signals .....	863
19.5	Two-Dimensional Digital Filters .....	866
19.5.1	Two-Dimensional Convolution .....	866
19.5.2	Two-Dimensional Z Transform .....	867
19.5.3	Two-Dimensional Transfer Function .....	867

# xvi Contents

19.5.4	Stability	867
19.5.5	Frequency-Domain Analysis	869
19.5.6	Types of 2-D Filters	871
19.5.7	Approximations	872
19.5.8	Applications	873
19.6	Adaptive Digital Filters	873
19.7	Problems	874
<b>Appendix: Complex Analysis</b>		<b>879</b>
A.1	Introduction	879
A.2	Complex Numbers	879
A.2.1	Complex Arithmetic	881
A.2.2	De Moivre's Theorem	882
A.2.3	Euler's Formula	882
A.2.4	Exponential Form	883
A.2.5	Vector Representation	884
A.2.6	Spherical Representation	885
A.3	Functions of a Complex Variable	886
A.3.1	Polynomials	886
A.3.2	Inverse Algebraic Functions	886
A.3.3	Trigonometric Functions and Their Inverses	887
A.3.4	Hyperbolic Functions and Their Inverses	888
A.3.5	Multi-Valued Functions	889
A.3.6	Periodic Functions	891
A.3.7	Rational Algebraic Functions	892
A.4	Basic Principles of Complex Analysis	893
A.4.1	Limit	893
A.4.2	Differentiability	894
A.4.3	Analyticity	894
A.4.4	Zeros	894
A.4.5	Singularities	895
A.4.6	Zero-Pole Plots	896
A.5	Series	898
A.6	Laurent Theorem	901
A.7	Residue Theorem	905
A.8	Analytic Continuation	906
A.9	Conformal Transformations	907
